Hard Drive Production Severely Affected by Floods in Thailand

U.S. Marine Corps photo by Cpl. Robert J. Maurer

Rojana Industrial Park in Ayutthaya Province, Thailand, is one of several industrial areas affected by the 2011 Thailand floods.

Severe flooding has decimated hard drive manufacturing plants and hard drive component plants in Thailand. It is estimated that 65% of hard drives and hard drive components are manufactured in the region affected by the flooding. Hard drive prices have skyrocketed and shortages have already occurred.

Polyline is working with our manufacturers to obtain as much hard drive inventory as we can, even at higher prices. We are currently allocating hard drives to ensure as many people as possible are able to continue their current projects.

To help you make an informed decision, we're providing the following compatibility charts to help you identify hard drives that are comparable to your favorite brands. Please call your Polyline storage specialist to help find alternative hard drives that may not be listed here.
